

TEJASWI ERATTU TAJ

Seattle WA | tjerattu@gmail.com | <https://tejaswierattuwebsite.vercel.app/> | Software Engineer

EDUCATION

University of Washington: BS in Informatics

Focus area: Software Engineering + Cyber Security

Expected Graduation date: 2028

GPA: 3.8/4.0

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, HTML/CSS, SQL, PHP, Swift, Lua

Frameworks & Tools: React, Git, WordPress, Node.js, MySQL, VS Code Extension API, ARKit, Webpack, Power BI

ML/AI: Classification, Regression, Model Evaluation, Hyperparameter Tuning (scikit-learn, GridSearchCV, Pandas, NumPy), Computer Vision (YOLOv8, CoreML, Vision), LLM API Integration (OpenAI API)

Cloud/Infra: AWS, Azure, GCP, Docker (familiarity), CI/CD (GitHub Actions)

Design: Adobe Creative Suite (Photoshop, Illustrator, Spark)

PROFESSIONAL EXPERIENCE

Software Engineering Lead, Accountability & Hopeful Fridays

May 2026 – Present

- Led technical infrastructure planning across 6 systems (GoHighLevel, GitHub, SharePoint, Microsoft Planner, Trello, WordPress), designing a 6-phase roadmap covering CI/CD, website migration, and member portal
- Built 3 task management proof-of-concepts (Microsoft Planner, Trello, GitHub Projects) and delivered structured comparison to guide leadership decision for a 10+ person organization
- Designed CI/CD pipeline architecture (feature → development → staging → production) with branch protection and required reviewers, establishing deployment standards for a team of 5+ developers
- Audited and documented 5+ GoHighLevel automation workflows and created safe test protocols to prevent disruption to live member communications
- Consolidated 40+ cross-team tasks into a centralized tracking system, reducing coordination overhead across technical and non-technical contributors

Developer Intern, Kerala Association of Washington

May 2025 – Dec 2025

- Migrated 2,800+ member records to WordPress via custom PHP/MySQL ETL pipeline, cutting manual data entry 75%
- Built custom WordPress plugins (PHP, MySQL, JavaScript) for real-time member management, including automated daily backups
- Automated report generation with exportable data fields (PHP, SQL), cutting monthly turnaround from hours to minutes

AI Trainer and Tester, Apollo AI

May 2024 - May 2025

- Trained and evaluated 5 classification/regression machine learning models for Saturn AI app, improving grading accuracy by 40% for 50+ K-12 students
- Optimized model performance through hyperparameter tuning, reducing average response time from 8 seconds to 3 seconds

Machine Learning Manager, Cyber Minds Non-Profit

Jan 2024 - June 2024

- Developed and deployed website chatbot (JavaScript, Node.js, OpenAI API) handling 100+ monthly interactions, cutting response time 60%
- Led 5-person cross-functional team through Agile sprints (Jira, Git) to deliver ML integration 2 weeks ahead of schedule
- Built ML model (Python, scikit-learn) for 8-module cybersecurity course, boosting student engagement scores 35%

Frontend Developer, GoEzz

July 2022 - Aug 2023

- Built 5 responsive webpages (React, JavaScript, Webpack) improving site load time 30% and user engagement 25%

PROJECTS

Github Extension

Jan 2026 - Jun 2026

- Built TypeScript VS Code extension using Node.js child_process for direct Git CLI integration across a 9-stage pipeline (parsing, risk analysis, safe execution)
- Supported 6 core Git workflows (commit, push, pull, branch, staging, sync) via VS Code Webview API-driven guided assistant flows
- Gated every destructive Git action behind preview-and-confirm UI, preventing blind execution for student teams of 2-10

Findar — AR Object Finder (iOS)

Feb 2026

- Built Findar, an AR iOS app that locates lost household objects via voice command with zero setup (Swift, ARKit, CoreML, YOLOv8n), detecting 80+ object categories in real time in 24 hours
- Processed raw LiDAR depth buffers (CVPixelBuffer) to compute object distance and guide users to lost items via 5-zone directional voice navigation
- Engineered concurrent on-device detection pipeline (Vision, background queues, frame-skipping) sustaining 60fps while running YOLOv8 inference every 8th frame
- Built safety and voice systems, sub-30cm obstacle detection with haptic alerts, natural-language command parsing (SFSpeechRecognizer) for hands-free searches like "find my keys"

LEADERSHIP AND CREDENTIALS

- Languages:** English (Fluent), Malayalam (Native), Spanish (Elementary) **Certifications:** AWS AI Practitioner, Security +, AWS Cloud Practitioner **Other Leadership:** Women in Informatics Finance Director (6 months – present), Palana UW Night Ride Application Security Engineer (3 months – present), Martial Arts Head Instructor (3 years - 2024), Coding Instructor (3 years - 2025)
